# Inspiration for your project

Handpicked references as a source of inspiration, sorted into 10 types of application.

In the private sector, the trend is clearly in using a single floor covering for an entire project. This consistent basis opens up new design options, but at the same time places new demands on quality, functionality, and, of course, comfort. mafi natural wood floors are flexible enough to be used in wellness areas, children's rooms, and open-plan kitchens.

In the public sector, mafi floors are mostly used in hotels, restaurants, medical practices but also frequently in offices. Wood affects all of our senses, relaxes, and promotes a sense of well-being. Thanks to mafi's unique and unadulterated surfaces, mafi natural wood floors improve the indoor climate, clean the air, and reduce static electricity coming off electrical devices.

# KITCHENS

## Gathering spaces

- No other material than unadulterated wood creates such a unique, pleasant atmosphere where people like to meet and linger.
- Open living/dining areas especially benefit from the versatility and resilience of mafi natural wood floors.

PRIVATE  
Arlington, USA  
Architect: Interior Matter

# Turning cooking into an absolute pleasure

- Standing for a long time at the stove is much easier on mafi natural wood floors than on tiles or stone, for example. This is due to the softwood middle layer as well as the wood itself.
- Our air-dried oil finish puts you in direct contact with the wood surface which is therefore always at body temperature.

# Wood as an experience

- With mafi natural wood floors, you directly stand on the wood and not on an unnatural layer of wax or lacquer: this feeling makes the difference.
- The wood feels always warm to the body and thanks to the gentle brushing it is also a tactile experience.
- Our special 3-D wood floors are real eye-catchers that massage your feet at the same time, whether at home or in the hotel spa.

## Water, wood, and cleaning

- The open-pored surface of our natural wood floors allows moisture to be absorbed and later released back into the room. This makes the floor resistant to average amounts of water in the bathroom (as long as it has a chance to dry in between).
- Cleaning the floor is as easy as washing your hands: just use soap and warm water.

# No more stairs as a sore thumb

- We manufacture bespoke stairs to match our floors.
- The coordinated material makes stairs part of the overall concept and makes them appear much homier.

[EAEB BKM]  
OAK Clear · brushed, 1x natural oil 1x white oil

PRIVATE  
Hamburg, Germany

## Necessities become design details

- We manufacture your natural wood floors to order and made to measure. The same applies to special details relating to wood floors.
- Popular details are matching floor outlets, window sills, air vents, skirtings, and even glass plates embedded in the floor in front of a fireplace.

PRIVATE  
Lichtenstein, Germany

[EITO BKN]  
Tiger OAK black · brushed, natural oil

# Flex: the flexible natural wood plank

- „Back to the original shape“ is the motto of mafi's Flex planks. A tree trunk is round and so is the mafi Flex plank.
- Columns or walls can be clad in the round, flexibly up to a radius of 360°.
- Particularly exciting: a flowing transition between floors and tabletops, for example.

PRIVATE  
Manly, Australia

## The MAFI formula: your checklist for selecting floors

Countless terms, varied arguments in consultations, and blurred boundaries - whether manufacturers or retailers, do not make it easy to find your way in the wooden floor jungle. The MAFI formula is a tool that lets you ask the right questions and review the most important quality criteria:

### Material

Where does the wood come from? How does the product act over time? How sensitive is the floor and is it easy to repair or does the entire surface always have to be refinished?

### A balanced structure

Ask about the thickness of the top layer, the symmetry of the back layer, and the adhesives used. Is the floor suitable for underfloor heating?

### Feel

Color and surface treatment are inextricably linked. Is it just a seal or a high-quality, air-dried oil surface that leaves the wood natural? Touch the surface and feel the difference between plastic and wood!

### Ingredients

Which substances and agents were used in the manufacturing process? How does the product behave in terms of indoor climate and healthy living?

# Tested & trusted, mafi awards

Independent certifications guarantee security. mafi places a strong focus on environmental and sustainability certifications, as it is challenging to distinguish between greenwashing and real sustainable brands in this area.

## German Design Award

The German Design Award recognizes innovative products and projects, their manufacturers and designers, and sheds light on unique design trends. In 2017, mafi was awarded the German Design Award Special for the LARCH Domino Vulcano.

## Red Dot Design Award

„Red Dot“ has established itself internationally as one of the most coveted seals of quality for outstanding design. mafi participated in the competition in 2009 and 2012 and received an honorable mention for product design 2009 and won the Product Design Interior category in 2012.

## Energy Globe Award

The Energy Globe Award is the world's most prestigious environmental prize. It annually honors outstanding, sustainable projects with focusing on resource conservation, energy efficiency and the use of renewable energies. mafi won the 2011 award in the earth category.

## ILFI – International Living Future Institute

The International Living Future Institute is a non-profit organization with the world's strictest standards for the construction industry. Its mission is to transform humanity so that it gives more to our environment than it takes. mafi has been a proud partner of the ILFI since 2019.

## Living Product Challenge

LPC is a program for manufacturers to create products that are natural, inspiring, which give more back to the environment than they take away from it. LPC is the strictest certification program on the planet. mafi is the first wood floor manufacturer in the world to have successfully completed the certification.

reddot design award  
winner 2012

## mindful MATERIALS

mindful Materials is an online material library where manufacturers can present their products and certificates. The platform specializes in the sustainability market in the construction industry. mafi has put 53 products online on the platform for architects, designers, and sustainability managers to discover.

## EPD – Environmental Product Declaration

EPD is an environmental product declaration for manufacturers and shows the sustainable life cycle for the entire production of a material or individual product. mafi has carried out a complete life cycle analysis of its production line. The entire mafi portfolio, and not just a specific product line, was shown as being net carbon-negative. This is because we bind more CO<sub>2</sub> than we emit.

## HPD – Health Product Declaration

HPD is an international health product declaration that tests the ingredients of a product and its toxicity. mafi's HPD certificate confirms the harmlessness of our entire product line.

## USGBC – United States Green Building Council

The mission of the United States Green Building Council (USGBC) is to change the way buildings are planned, built, and operated and to leave behind an ecologically and socially responsible healthy environment that improves the quality of life for us humans. mafi is a USGBC partner and provides valuable points for building certification.

## Declare

The Declare label is like the nutritional and ingredient labels seen on food products and tells consumers where the material comes from, where it is produced, and where it can end up at the end of its life cycle. mafi uses the „Declare 2.0 100 % Red List Free – verified by third parties“ label.

## Red List Free

The Red List was launched by the International Living Future Institute (ILFI) and lists materials, chemicals, and elements used in the construction industry and products that are hazardous to human health and the environment. mafi natural wood floors do not contain any of these substances and are therefore 100 % Red List Free.

## Sensitive Choice – National Australian Asthma Institute

As a non-profit organization, the National Asthma Institute helps some 300 million allergy and asthma sufferers around the world find the right products that can make their lives easier. mafi was the first wood floor manufacturer to complete the certification program successfully.

## FSC – Forest Stewardship Council®

As a pioneer of sustainability certification in forests, FSC has made a name for itself promoting and monitoring sustainability practices in forestry. mafi only uses sustainable wood and also offers FSC certification – FSC C017086.

## Resources Saved

Interseroh – one of the leading providers of sustainable system services to close all aspects of product, material, and logistics cycles has awarded mafi the „resources SAVED 2013“ certificate. The calculations show that 24,037 kilograms of resources were saved in 2013.

## MAS Certified Green

MAS is an emissions test laboratory specializing in helping companies to manufacture products for a green future with ecological building products. mafi natural wood floors were certified with the MAS Certified Green Label in 2018. mafi is one of the few wood flooring manufacturers in the world to have received this certification.

Approved by the National Asthma Council Australia's Sensitive Choice® program

mafi is FSC® certified. Products with FSC® certification are available on request.

# Inspiration

... may have been the first step, but the result is always an expression of personality and creativity.

With our projects from all over the world and in a various applications, we try to set trends and point new ways forward. mafi natural wood floors form the basis for rooms and a wide variety of interior design concepts. Architects, designers, sales partners, and builders use it to create entirely individual projects that also become a source of inspiration for others and thus mark a new, first step.

We draw our inspiration from nature and the natural texture of wood. In addition to the design, it is above all the technology used in our production that reflects this approach, because we give it the time needed and don't sacrifice naturalness for speed. This is why our wood dries in the open air, our white glue binds a little more slowly, but is free of pollutants, and our oil is absorbed deeply into the wood instead of drying quickly on the surface.

Our inspiration is also found in the dialog and cooperation with the people who surround us.

On the one hand, these are our colleagues, suppliers, and business partners in the region who have a deep connection and history with natural and sustainable wood processing. mafi is located in the heart of Europe on the edge of the Kobernauss Forest, which, together with the Hausruck Forest, forms one of the largest contiguous forest areas in Central Europe. Our two factories are just 12 km apart and both take wood logs and turn them into planks 100 % made in Austria.

On the other hand, we draw our inspiration from our wide range of contacts with architects, designers, and wood flooring experts worldwide. Whether we are encouraged to use color from Mexico, the timeless restraint of Scandinavia, the modern simplicity of Asia, or uncompromisingly sustainable project requirements from the USA, inspiration is found in every encounter.

Let us inspire you today!
